Dear doctors,

This is a case of 31 years old female under HOP insured since 01-01-2020 class B+NSSF subject to underwriting needs admission on 18/10/2024 at Zahraa hospital under care of Dr. X. She is G1P0000, IVF pregnancy, known to have ITP, presenting at 12w of gestation (embryo-transfer done on 29/07/2024) for vaginal bleeding upon awakening with presence of big clots. She's been having mild Right inguinal pain for the past 3 days.

Requested LOS: 1day

CPT Codes	57510
Physician's Name +Mobile	Dr. X
Admission Date	18/10/2024

Please note that this is not a real case, therefore we do not have any imaging results.
if imaging shows cervical polyp, could you kindly advise in these below scenarios:

- 1- If cervical polyp is related to a complication of pregnancy
- 2- if case related to any complications of IVF
- 3- If bleeding is related to ITP (auto-immune disease)
- 4- If ITP is related to genetic/hereditary/congenital diseases.

Thank you,
Best regards,

Maria-Aimee Abou Chaaya
