

## Study Result

### Narrative & Impression

#### Exam Name

XR Pelvis + one hip lat 24/10/2024

#### Clinical Indication

r/o fracture left femur

#### Technique

AP and lateral views of the pelvis.

#### Comparison

None.

#### Impression

There is an acute displaced transcervical fracture of the left femur with cranial displacement of the proximal femur shaft. No dislocation. The pelvic ring is intact.

Large inguinal hernia containing nondilated bowel loops.

#### Other findings

Is there a critical or an unexpected finding?

No

## Study Result

### Narrative & Impression

#### Exam Name

CT left Hip without contrast

#### Clinical Indication

left hip fracture

#### Technique

Unenhanced axial CT images of the left hip with multiplanar reformats. 3-D construction images were added.

#### Comparison

In correlation with the same day pelvic x-ray.

#### Impression

There is an acute displaced subcapital left femoral neck fracture with mild cranial and posterior displacement of the distal femur shaft.

The pelvic ring is intact.

Mild hip joint effusion.

Mild spondylosis of the visualized lower lumbar spine.

Extraskkeletal findings:

There is a large right inguinal hernia containing nondilated small bowel loops.

Non-complicated colonic diverticulosis.

Atherosclerotic disease of the visualized iliac and femoral arteries.

Other findings

Is there a critical or an unexpected finding?

No
